Time of day	morning	midday	evening
Activity	focussed work	therapy at 10.000 lux	rest

Things to know

More and more companies are designing the perfect workplace with optimal light. Thereby, changing color temperatures and light intensities are used („Human Centric Lighting“).

The concept of Human Centric Lighting focuses on people and their perception of light. The ideal lighting system in the office - for example - changes color temperature during the day to accompany employees in phases of high concentration or relaxation. It boosts motivation and productivity of employees, while reducing accidents and absence.
